

Report Number: 2

Page Number: 1

Artificial Intelligence (AI) is transforming industries worldwide.

Machine Learning is a subset of AI that enables systems to learn from data.

Deep Learning uses neural networks for complex pattern recognition.

Natural Language Processing helps computers understand human language.

Retrieval-Augmented Generation (RAG) combines vector search with LLMs.

FAISS is commonly used for vector storage and similarity search.

Ollama allows running local LLMs without internet access.

This is dummy data generated for a RAG project containing 10,000 pages.

This is dummy data generated for a RAG project containing 10,000 pages.

Report Number: 2

Page Number: 63

Artificial Intelligence (AI) is transforming industries worldwide.

Machine Learning is a subset of AI that enables systems to learn from data.

Deep Learning uses neural networks for complex pattern recognition.

Natural Language Processing helps computers understand human language.

Retrieval-Augmented Generation (RAG) combines vector search with LLMs.

FAISS is commonly used for vector storage and similarity search.

Ollama allows running local LLMs without internet access.

This is dummy data generated for a RAG project containing 10,000 pages.

Report Number: 2

Page Number: 64

Artificial Intelligence (AI) is transforming industries worldwide.

Machine Learning is a subset of AI that enables systems to learn from data.

Deep Learning uses neural networks for complex pattern recognition.

Natural Language Processing helps computers understand human language.

Retrieval-Augmented Generation (RAG) combines vector search with LLMs.
